

Inspection Readiness and Preventative Maintenance

Who is coming to your site? What will they find? How can you prepare? Whether its HUD, OSHA, your local inspector, bank lender or those pesky corporate types, this session will give you tips and tricks on how to make sure your community is always inspection ready no matter when it happens or by who. This session will discuss how a solid preventive maintenance program will also help with your inspection readiness, but also lower costs and extend the life of your site's equipment, while reducing everyday workload.

Understanding inspection readiness and preventive maintenance is more than just knowing its definition. It is about practice, patience, and due diligence.

During this session we will:

- Define inspection readiness
- Create a roadmap on where to begin the process
- What you can do starting tomorrow to begin being inspection ready
- What does a PM program look like?
- Discuss how to begin when one doesn't exist
- Build a PM and inspection readiness culture into your work day
- Identify when to use vendors and when to do in house
